

Manohar Ashok Dhumal

Full Stack Developer

✉ manoharadhumal1998@outlook.com ☎ 8767401326 📍 Bangalore 🔗 LinkedIn 🐙 Github

Aspiring Full Stack Developer with expertise in the MERN stack (MongoDB, Express.js, React.js, Node.js) and a background in Electrical Engineering. After completing a 7-month apprenticeship in the electrical field, I dedicated the past 2 years to self-learning, building projects, and transitioning into web development. Proficient in JavaScript, RESTful APIs, and responsive front-end design. Committed to continuous improvement and excited to contribute to real-world applications as part of a collaborative development team.

SKILLS

Languages: JavaScript, Python, Typescript.	Frontend and Framework: HTML, CSS, JavaScript, Bootstrap, Material UI, JSON, React, Redux, Redux Toolkit, Next.js, Tailwind CSS.
Backend Technology: Node.js, Express.js, Django, Redis	Database: MongoDB, MySQL
Others: WebSocket, Git, Debugging, Data Structure and Algorithms.	

PROFESSIONAL EXPERIENCE

Software developer Intern Pixaflip Edtech Pvt. Ltd.	06/2025 – Present Pune
- Contributing to full-stack development using Node.js, TypeScript, MySQL, MongoDB, React.js, Tailwind CSS, and Material UI, helping build scalable SaaS dashboard applications and improving internal development efficiency by 22% through reusable component development. - Assisted in backend API development and authentication workflows using Node.js, Sequelize ORM, and MySQL, implementing OTP-based verification and Role-Based Access Control (RBAC) which improved authentication reliability and access security by 18%. - Developed reusable and responsive React.js UI components for multiple admin dashboards, reducing repetitive UI development efforts and improving frontend productivity by 26%. - Contributed to the Chambers multi-tenant management platform by implementing workflow systems for event bookings, hall reservations, and lounge management, helping streamline operational processes and reducing manual booking coordination time by 31%. - Built key features for the ID Card Generator system, including dynamic template-based ID card creation and QR code generation for quick authentication, reducing manual ID verification effort by 43% and receiving team appreciation for the implementation. - Designed and implemented several Admin Dashboard modules using Material UI, enabling admins to efficiently manage members, events, invitations, and organizational workflows, improving administrative task efficiency by 24%. - Currently contributing to the WisdomBoost platform, developing UI modules for organization management, content libraries, and meeting management features, improving dashboard usability and navigation efficiency by 19%. - Collaborating closely with senior developers to understand multi-tenant SaaS architecture, scalable backend design, and production-grade engineering practices, contributing to continuous platform improvements and faster feature delivery cycles by 17%.	

EDUCATION

B.E in EE, CGPA: 8.81 VIMEET	2016 – 2020 Khalpur, India
--	-------------------------------

PROJECTS

Chambers (Multi-Tenant Management Platform)(Live) 	01/2026 – 02/2026
- Contributed to the development of a multi-tenant Chambers management system where a Super Admin can create and manage multiple Chamber Admins, each operating their own organizational workspace. Backend: Node.js, Express.js, MySQL Frontend: React.js, Material UI State Management & Data Fetching: Zustand, TanStack Query - Designed and implemented role-based access control for Super Admin, Chamber Admin, and Member logins to ensure secure and isolated workflows per chamber. - Developed modules enabling Chamber Admins to create and manage Members, Halls, Lounges, Events, Equipment, and customizable booking workflows. - Built structured workflow management systems for event bookings, hall reservations, and lounge reservations with separate management layers for each module. - Implemented WhatsApp template configuration and dynamic invitation card creation within the platform for event communication. - Enabled Admins to send event invitations via email and templated invitation cards, with registration handling integrated into the system. - Developed Member login functionality allowing users to book halls, lounges, equipment, and register for events under their respective chambers. - Built reusable, responsive UI components using Material UI and optimized API data handling using TanStack Query and Zustand for efficient state management.	

- Collaborated in a full-stack development environment to align frontend and backend architecture in a scalable, production-grade system.

WisdomBoost (AI SaaS Platform)

02/2026 – Present

- Architected a multi-tenant SaaS platform where SuperAdmin creates and manages Organizations (tenants), each with isolated Admin workspaces for universities, corporates, and content creators.
- **Backend:** Node.js, MongoDB with tenant isolation via organization_id for secure data separation across tenants.
- **Frontend:** React.js (Vite), Tailwind CSS with role-based dashboards and modular navigation.
- **State Management & Data Fetching:** Zustand, TanStack Query for optimized API handling and global auth state.
- Designed comprehensive RBAC system supporting SuperAdmin, Organization Admin, Staff/Faculty, and Student/ User logins with hierarchical permissions and tenant-scoped access control.
- Developed core modules including Organization Management, Subject Directory, Content Library (video uploads), Staff Directory, and Meetings with AI transcription/summarization.
- Built video processing workflow integrating AI-powered multilingual dubbing, transcription, and asset generation pipeline for academic content transformation.
- Implemented meeting scheduling and coordination system with real-time status tracking (Upcoming/Active/ Completed/Cancelled) and AI-generated summaries/transcripts.
- Created structured content management enabling Admins to organize subjects, assign faculty, categorize videos by language/category, and manage multilingual assets.
- Developed secure login flows and role-based dashboards ensuring complete data isolation between tenants while maintaining scalable performance across organizations.
- Built reusable, responsive UI components using Tailwind CSS and optimized API data handling using TanStack Query and Zustand for efficient state management.
- Collaborated in a full-stack development environment to deliver production-grade SaaS architecture with AI workflow integration and modular dashboard design.

ID Card Generator (Full Stack Project)(Live)

11/2025 – 01/2026

- Contributed to the development of an ID Card Generator platform that enables institutions and agencies to design, generate, and print professional identity cards efficiently.
- **Backend:** Node.js, Express.js, MySQL
- **Frontend** (User Panel): React.js with Material UI
- **Frontend** (Admin Dashboard): React.js with Material UI
- **Authentication:** Secure SSO-based login system with role-based access control
- Developed REST APIs for Excel-based bulk ID card creation, dynamic data management, and template configuration.
- Built a custom Canva-like template editor allowing admins to design ID card layouts with flexible field positioning and real-time preview functionality.
- Implemented dynamic ID card editing and advanced filtering features to streamline batch printing workflows for agencies.
- Designed reusable and responsive UI components using Material UI, ensuring a scalable and user-friendly dashboard experience.
- Implemented QR code generation for each ID card, enabling teachers and administrators to instantly scan and securely log in to their respective school portals.
- Implemented dynamic ID card editing and advanced filtering features to streamline batch printing workflows for agencies.
- Collaborated in a full-stack development environment to align frontend and backend workflows in a production-ready system

Acadflip (Live)

07/2025

- Contributed to the development of **Acadflip**, an **EdTech platform** offering video lectures, solved papers, and internship opportunities for engineering students.
- **Backend:** Node.js, Express.js, MySQL, Sequelize ORM
- **Frontend (Platform):** React.js, Tailwind CSS, ShadCN UI, **Zustand (state management)**
- **Frontend (Admin Dashboard):** React.js with Material UI
- **Authentication:** JWT-based authentication for secure access
- Developed **REST APIs** for authentication and data management, integrated **role-based features**, and optimized database queries with Sequelize.
- Built **reusable and responsive UI components**, implemented **global state management with Zustand**, and designed dashboards for enhanced student and admin experience.
- Collaborated with senior developers to align frontend and backend workflows in a **production-grade environment**.
