

Artificial Intelligence (AI)

Artificial Intelligence (AI) refers to the simulation of human intelligence in machines that are programmed to think and learn like humans.

AI systems can perform tasks such as problem-solving, decision-making, speech recognition, and visual perception.

There are different types of AI, including Narrow AI (designed for specific tasks) and General AI (which aims to perform any intellectual task a human can do).

AI is widely used in applications like virtual assistants, recommendation systems, autonomous vehicles, and healthcare diagnostics.

The goal of AI is to improve efficiency, accuracy, and automation in various industries.
